

The Rogers Memorial Library & East End Libraries present

## The Poetry of Our Universe (A Zoom Event)

Carmen Bugan, Ph.D., author and poet  
& Alessandro Tricoli, Ph.D., particle physicist

**Monday, November 23, 2020, at 5 p.m.**

Poets have always looked at the immense beauty of the sky and found inspiration to ponder our place in the universe. Their words of praise for the sun, the moon, and the stars bring this beauty closer to our hearts. It is no surprise that particle physicists, although they deploy the abstract language of mathematics, are often concerned with the same questions.

Join us on a journey with an award-winning couple – one a poet, the other a physicist—who will explore how the marriage between science and poetry enriches our understanding of the universe.
